1. Overview

The purpose of this document is to give overview of Java Batch Execution and Monitoring User Interface (JBEAM UI). The document explains how to use JBEAM UI (desktop application) with the help of screen shots and its usage.

2. Pre-Requisites

While running JBEAM application following is essential:

- 1) Windows Desktop is required.
- 2) Recommended screen resolution is of 1024 x 768.
- 3) The desktop time must match with the server date and time with locale difference. Where server means any server where the JBEAM core is installed and configured. Example: If the JBEAM UI is installed on a desktop windows machine in India and the CORE is installed in USA whose time zone is Eastern then the time on the desktop in India must match that of USA server with the locale difference of GMT +5:30.
- 4) JBEAM UI is installed and ready for use.
- 5) The Web service component (Monitor-Services) is installed and running. The IP address and port of the server on which the web service component is installed is configured in CONFIGURATION table of bpms_monitor schema.
- 6) To configure multiple services, modify the CSV file embedded below to suite your configurations and then upload the same through the screen.

jbeam-server-config.
csv

Project: JBEAM	Doc. Name: JBEAM User Guide 5.1.2	Status: Draft
Document Classification: Internal Restricted when filled.	Date: 8/7/2014 2:25 PM	Page : 8 of 70

3. Functions / Modules

JBEAM UI provides interface to operate and monitor a batch execution. The JBEAM UI is a desktop application. It has been created using Adobe AIR.

The functions in JBEAM are explained in below sections

- Login Screen
- Server Configuration
- Home Screen
- View Batch
- Run Batch
- View Schedules
- Reports
- Manage User
- Password Management
- User Profile

Project: JBEAM	Doc. Name: JBEAM User Guide 5.1.2	Status: Draft
Document Classification: Internal Restricted when filled.	Date: 8/7/2014 2:25 PM	Page : 9 of 70

4. Login Screen

The login screen looks as given below. The configure server link helps to add new servers as published by the service provider. The server configuration is explained in section [Server Configuration](#).

To login into JBEAM,

- Enter user id, password.
- Choose the server.
- Click on 'Login' button.

After login, the next screen will be Home Screen.

Figure 1 Login Screen

Project: JBEAM	Doc. Name: JBEAM User Guide 5.1.2	Status: Draft
Document Classification: Internal Restricted when filled.	Date: 8/7/2014 2:25 PM	Page : 10 of 70

5. Server Configuration

This screen facilitates to configure server. There are two options namely Upload Server and Add server to do it. The configured servers are displayed in Server List.

Figure 2 Server Configuration

Project: JBEAM	Doc. Name: JBEAM User Guide 5.1.2	Status: Draft
Document Classification: Internal Restricted when filled.	Date: 8/7/2014 2:25 PM	Page : 11 of 70

Upload Server

To configure multiple servers, use 'Upload Server'. To upload the data, use .csv files only.

Figure 3 Upload Server

Following are the steps:

- a) Click on 'Browse'.
- b) Select a CSV file (in which server data is stored) from file path.
- c) Click on 'Upload'.
- d) The servers can be viewed in Server List
- e) On successful configuration of server, click on 'Back' button to go back to Login screen.

Project: JBEAM	Doc. Name: JBEAM User Guide 5.1.2	Status: Draft
Document Classification: Internal Restricted when filled.	Date: 8/7/2014 2:25 PM	Page : 12 of 70

Add Server

To configure a single server, use 'Add Server'

ADD SERVER

Server Name IP Address Port

Clear Add

Figure 4 Add Server

Following are the steps:

- Enter valid server name.
- Enter valid IP Address.
- Enter valid port number. It should be numeric.
- Click on 'Add'.
- On successful configuration of server, click on 'Back' button to go back to Login screen.

Figure 6 Update Server details

Following are the steps:

- Select the desired server from the server list.
- The selected server details are populated in Add Server section.
- Update the desired details such as IP address and port.
- Click on 'Update'. This updates the server list with the appropriate changes.
- Click on 'Back' button to go back to Login screen.

Project: JBEAM	Doc. Name: JBEAM User Guide 5.1.2	Status: Draft
Document Classification: Internal Restricted when filled.	Date: 8/7/2014 2:25 PM	Page : 15 of 70

6. Home screen

The home screen displays all the configured installations, to which the user has an access to view, along with their last executed batch details. There are two views for home screen namely 'POD VIEW' and 'LIST VIEW'. The default home screen is 'POD VIEW', which shows installations in pod format as shown below:

Figure 7 Home Screen Pods View

Note: The user can set the default view in the user profile. Once logged in, the default view can be switched between the POD/LIST VIEW.

Project: JBEAM	Doc. Name: JBEAM User Guide 5.1.2	Status: Draft
Document Classification: Internal Restricted when filled.	Date: 8/7/2014 2:25 PM	Page : 16 of 70

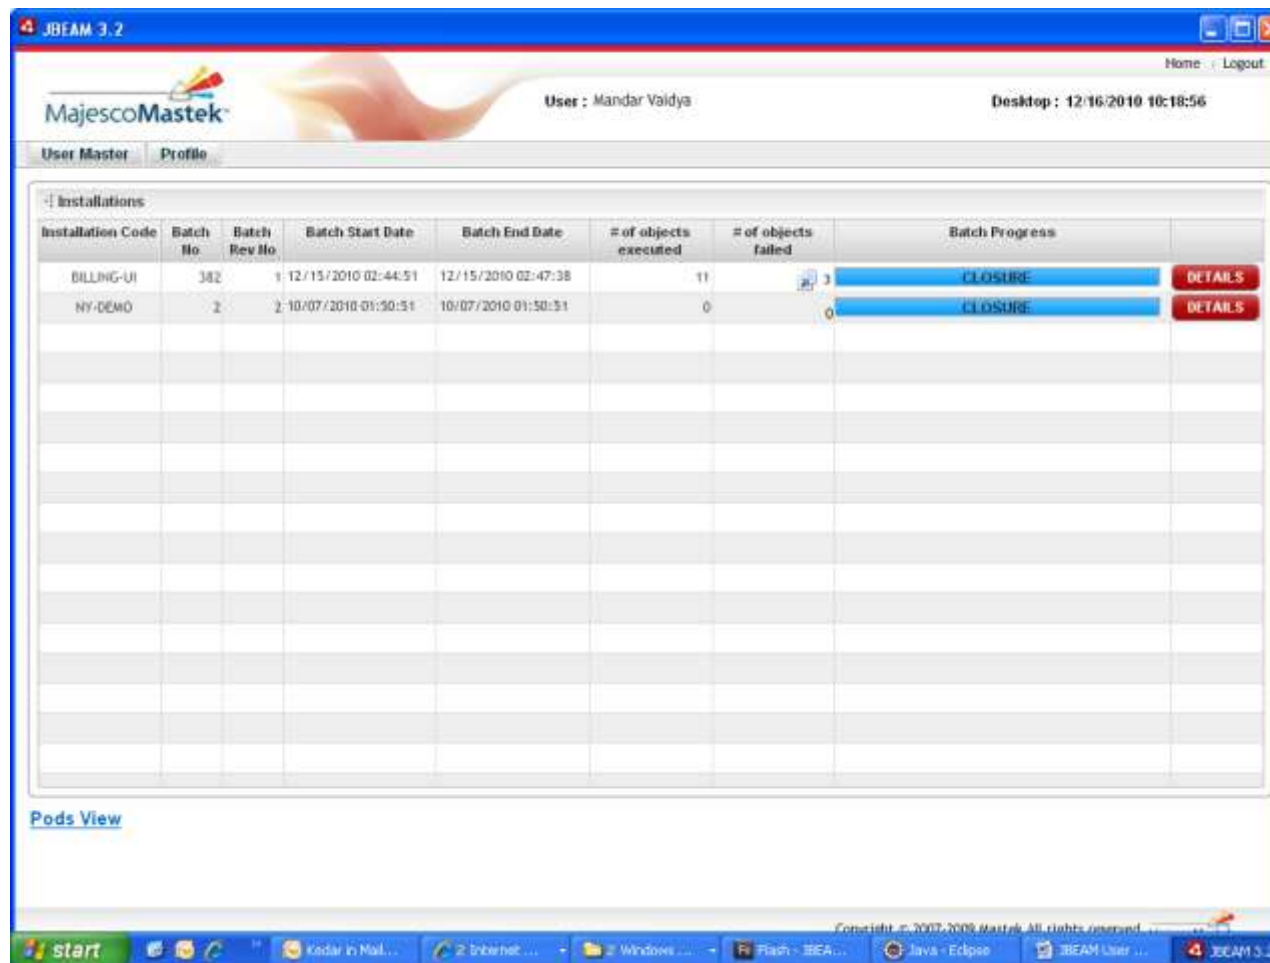

Figure 8 Home Screen List View

Project: JBEAM	Doc. Name: JBEAM User Guide 5.1.2	Status: Draft
Document Classification: Internal Restricted when filled.	Date: 8/7/2014 2:25 PM	Page : 17 of 70

The home screen has features like view batch details, start/resume or stop batch for each installation. The links for Home and Logout on the top right corner provide the facility to navigate to home page and log out from the system respectively. The home link also refreshes the data displayed on the home screen.

In POD VIEW, the position of a pod can be changed by dragging and releasing it to a new position. One can maximise, minimise or close a pod. To close any pod(s), click on the top right corner 'X' button to close. These features of the pod are applicable to all the pods across the system. To restore a pod after closure, click on 'Customize your Settings' link. A pop up will show the list of closed pod(s) or non-opened pod(s) (if any). Check the pod(s) and click on 'Submit' to restore the respective pod(s). To minimise any pod or pods, click on the top right corner '-' button. The minimised pod are stored just above the 'Customize your Settings' link. To restore a minimised pod, user can double click on the pod(s).

Every installation / pod will have information like:

- The installation code, batch number and batch revision number.
- Batch Start time
- Batch End time
- Current batch status
- Number Of objects executed
- Number Of objects failed
- Batch Status table

The statistics are collected every 5 seconds. Failed objects count is displayed as a link provided there are 1 or more failed objects. On click, a new popup window displays the details of the failed objects as shown in Figure 9 Failed Objects Window.

Project: JBEAM	Doc. Name: JBEAM User Guide 5.1.2	Status: Draft
Document Classification: Internal Restricted when filled.	Date: 8/7/2014 2:25 PM	Page : 18 of 70

Figure 9 Failed Objects Window

Project: JBEAM	Doc. Name: JBEAM User Guide 5.1.2	Status: Draft
Document Classification: Internal Restricted when filled.	Date: 8/7/2014 2:25 PM	Page : 19 of 70

The Batch Status table displays the execution steps as carried out by JBEAM Core in descending order. A link appears on the activity type 'Execution'. On click, a new popup displays the details of the batch objects executed as shown in Figure 10 Batch Object Details.

Seq #	Task Name	Status	Time Taken	Start Time	End Time
6321639	REMINDER_NOTICE_ACCOUNT - Delinquency_Notice_account()	Completed	1000	01/22/2013 14:46:41	01/22/2013 14:46:42
6321640	ACCOUNT_BILL - Account_bill()	Failed	1000	01/22/2013 14:46:40	01/22/2013 14:46:41

Figure 10 Batch Object Details

Project: JBEAM	Doc. Name: JBEAM User Guide 5.1.2	Status: Draft
Document Classification: Internal Restricted when filled.	Date: 8/7/2014 2:25 PM	Page : 20 of 70

When a batch is in progress, the installation pod looks as below:

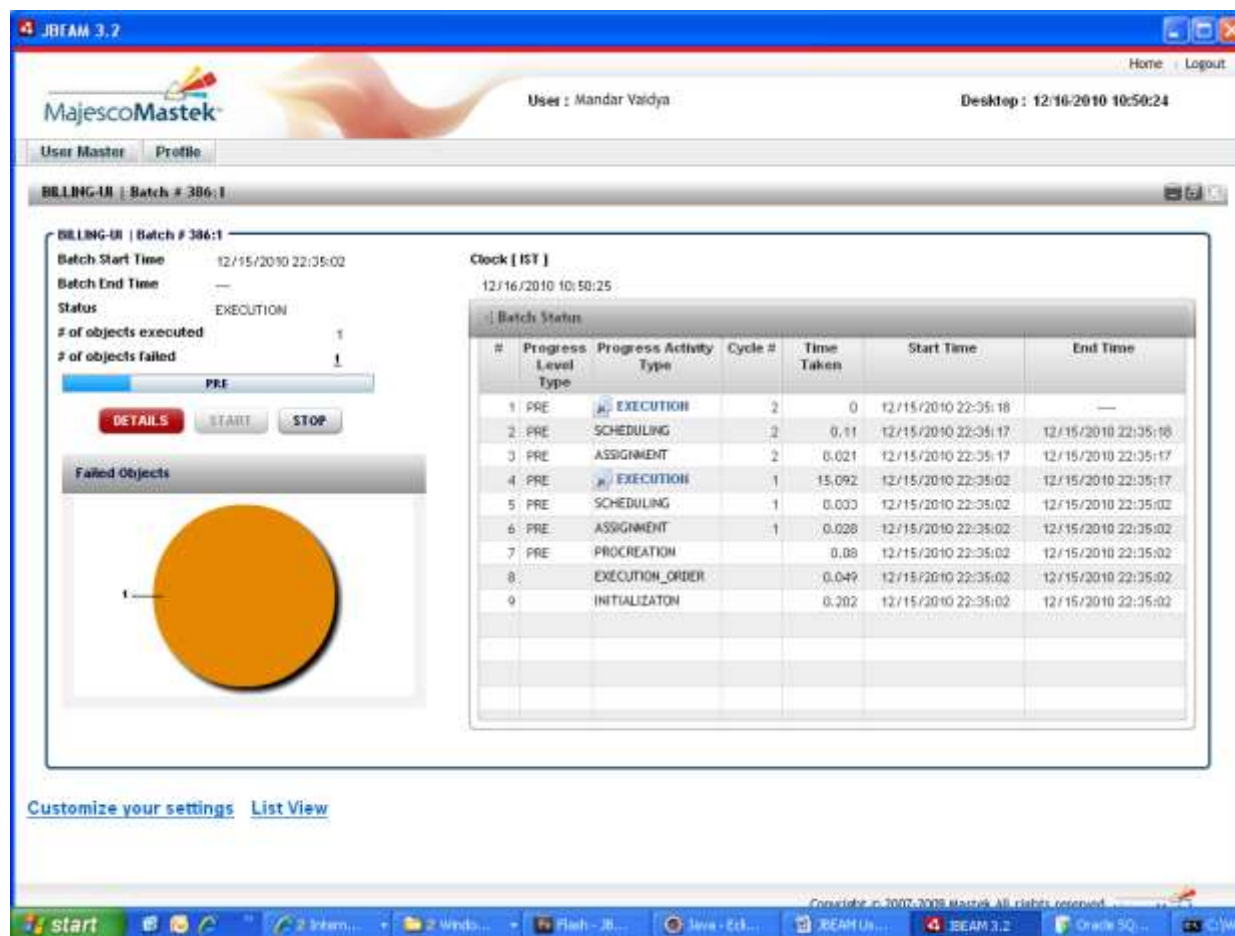

Figure 11 Installation pod with running Batch (Maximized)

Project: JBEAM	Doc. Name: JBEAM User Guide 5.1.2	Status: Draft
Document Classification: Internal Restricted when filled.	Date: 8/7/2014 2:25 PM	Page : 21 of 70

In POD VIEW, following buttons are provided:

Button	Functionality	Conditions		Visibility
		Enabled (Activated)	Disabled (Deactivated)	
DETAILS	To view details of the batch (navigates to batch details screen). Also to navigate to other menus like Run Batch.	1) Batch is running 2) Batch is stopped / completed	1) Fresh installation (No batch details available)	Visible to users with USER/ OPERATOR role
START/ RESUME	To start/ resume a batch	1) Fresh installation (No batch details available). (START) 2) Batch is stopped (RESUME)	1) Batch is running 2) Batch is completed	Visible to users with OPERATOR role only
STOP	To stop a currently running batch process. A request will be sent to the server and the server will respond with an alert on the screen	1) Batch is running	1) Fresh installation (No batch details available) 2) Batch is stopped / completed.	Visible to users with OPERATOR role only

In LIST VIEW, the button DETAILS is available on home screen and the RESUME/ STOP are available in Batch Summary Pod.

Note: For a fresh installation the button START will be enabled. On click, the Run Batch screen appears.

Project: JBEAM	Doc. Name: JBEAM User Guide 5.1.2	Status: Draft
Document Classification: Internal Restricted when filled.	Date: 8/7/2014 2:25 PM	Page : 22 of 70

7. View Batch

This screen is brought forward on the click of the 'DETAILS' button of the installation pod / installation list. The view batch screen is further divided into 5 sub pods. Out of these, two are static namely Batch summary and System Information and three are dynamic namely Batch Revision, Object Execution Graph and Per Scan Execution Count Graph.

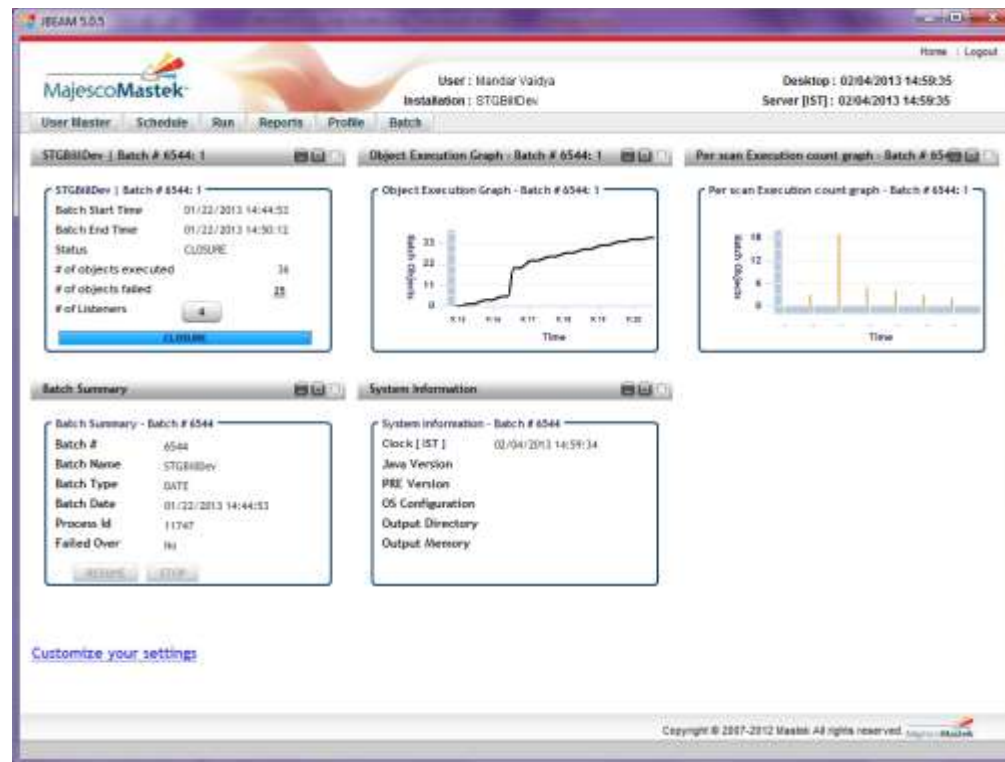

Figure 12 View Batch Screen with completed batch

Project: JBEAM	Doc. Name: JBEAM User Guide 5.1.2	Status: Draft
Document Classification: Internal	Date: 8/7/2014 2:25 PM	Page : 23 of 70
Restricted when filled.		

The Batch Summary pod shows:

- The batch number
- Name of the batch (if any)
- Type of the batch i.e. SPECIAL or DATE run
- Batch Start Date
- Batch Process Id which is generated by the server
- Failed Over Status (Yes/No)
- Batch Parameters list (provide while running SPECIAL batch)

This pod contains the buttons to RESUME or STOP a batch. The buttons have the same functionality as provided on home screen (POD VIEW).

While the batch is running, the STOP button will be enabled. If the batch is stopped, the RESUME button will be enabled. When a batch is in completed, both the buttons will be disabled (as shown in Figure 13 View Batch Screen with Batch Summary and System Information).

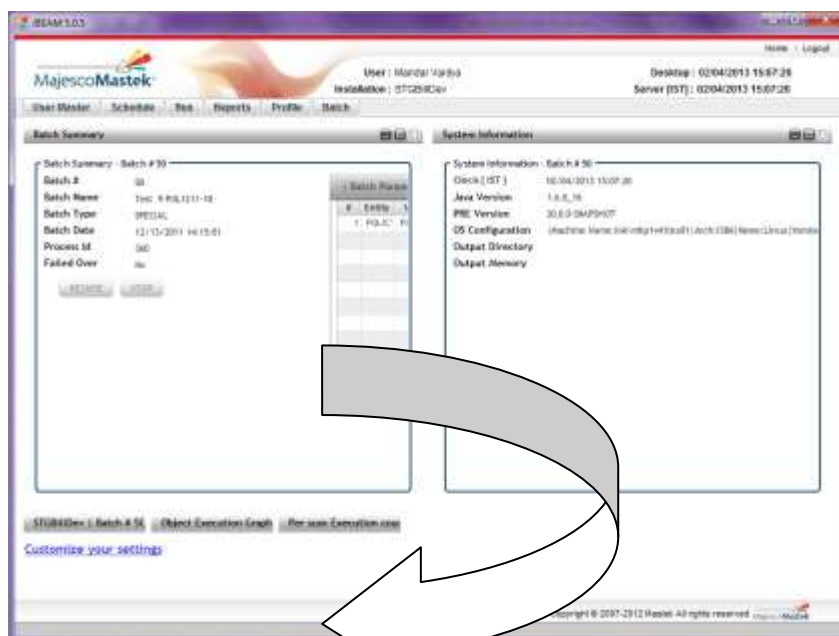

If the type of batch is SPECIAL, then only the Batch Parameters can be seen.

System Information pod displays the technical details as following:

- Java Version installed on the server
- PRE Version for running the batch
- The System Configuration of the server where the batch is processed
- Directory Path for the output
- Free memory available on the directory path for the output

Project: JBEAM	Doc. Name: JBEAM User Guide 5.1.2	Status: Draft

Figure 13 View Batch Screen with Batch Summary and System Information

Project: JBEAM	Doc. Name: JBEAM User Guide 5.1.2	Status: Draft
Document Classification: Internal Restricted when filled.	Date: 8/7/2014 2:25 PM	Page : 25 of 70

The three dynamic pods namely Batch Revision, Object Execution Graph and Per Scan Execution Count Graph are tied with a batch revision and will increase as per the number of batch revisions. If there is only one batch revision, then there will be 3 dynamic pods. If there are two batch revisions, then there will be 6 dynamic pods and so on. System will display the pods associated with latest revision. More details are as following:

Object Execution Graph Pod

The Object Execution Graph is a line graph for batch objects against time elapsed for the object execution. The batch objects are on Y axis and time elapsed is on X Axis. When batch is in progress, the graph is refreshed after every 5 sec. For closed batch revisions or a closed batch, the graph can be seen any time. To view the data for a particular point on a graph, move the cursor over the tip. . This graph always displays the last 100 records.

Figure 14 Object Execution Graph (Maximized)

Project: JBEAM	Doc. Name: JBEAM User Guide 5.1.2	Status: Draft
Document Classification: Internal Restricted when filled.	Date: 8/7/2014 2:25 PM	Page : 26 of 70

Batch Revision Pod

The batch revision pod once maximized shows details about the execution order. The following screen displays the Batch Revision pod in a maximized form.

Figure 15 Batch Revision pod (Maximized)

Project: JBEAM	Doc. Name: JBEAM User Guide 5.1.2	Status: Draft
Document Classification: Internal	Date: 8/7/2014 2:25 PM	Page : 27 of 70
Restricted when filled.		

Every batch revision pod will have statistics like:

- The batch number and batch revision number.
- Batch Start time
- Batch End time
- Batch status
- Number Of objects executed
- Number Of objects failed
- Number Of listeners
- Time Taken / Time Elapsed
- Batch Status table

The statistics are collected every 5 seconds. The details are displayed same as installation pod except the Number (#) of listeners. The Listener count is displayed as button. While a batch is running, the button colour remains red and on completion of the batch, it becomes white. On click, it opens a new popup window and displays the details of listeners as shown in below given figure. The details again include the number of failed objects for each listener spawn while execution of batch. To view details of failed objects for a listener, click on the desired row.

Project: JBEAM	Doc. Name: JBEAM User Guide 5.1.2	Status: Draft
Document Classification: Internal Restricted when filled.	Date: 8/7/2014 2:25 PM	Page : 28 of 70

Listener #	# of objects executed	# of objects failed	Time Taken (in min)
1	21	13	0.6
2	5	3	0.08
3	9	8	0.1
5	1	1	0

Figure 16 Listener Details Window

The Batch Status table displays the execution steps as carried out by JBEAM Core in descending order. A link appears on the activity type 'Execution'. On click, a new popup window will open to display the details of the batch objects executed as shown in Figure 10 Batch Object Details.

Project: JBEAM	Doc. Name: JBEAM User Guide 5.1.2	Status: Draft
Document Classification: Internal Restricted when filled.	Date: 8/7/2014 2:25 PM	Page : 29 of 70

Per Scan Execution Count Graph Pod

The Per Scan Execution Count Graph is a column graph for batch objects per scan against the time elapsed. The batch objects per scan are on Y-Axis and the time elapsed is on X-Axis. When batch is in progress, the graph is refreshed after every 5 sec. For closed batch revisions or a closed batch, the graph can be seen any time. To view the data for a particular point on a graph, move the cursor over the tip

Document Classification: Internal Restricted when filled.	Date: 8/7/2014 2:25 PM	Page : 32 of 70

8. RUN Batch

This screen facilitates to execute the batch either DATE (without parameters) or SPECIAL (with some parameters). It also facilitates to schedule a batch with associating recurrence factor.

Figure 19 Run Batch Screen

Project: JBEAM	Doc. Name: JBEAM User Guide 5.1.2	Status: Draft
Document Classification: Internal Restricted when filled.	Date: 8/7/2014 2:25 PM	Page : 33 of 70

This screen has been divided into two main parts:

- Start Batch Section

This screen accepts batch name, batch date, End Time, batch type (Special/ Date run) as explained below.

- Installation code

This will be populated by system, depending upon the installation selected (for which the user wants to run a batch).

- Batch name

This can be any logical name for the batch.

- Batch date

This is the only mandatory field (unless the button 'Attach Recurrence' is clicked).

- End Time (Time in minutes)

This is optional. Indicate the batch to stop after n minutes. The batch arrives at a logical completion and may not necessarily stop at the said time provided a logical completion is not arrived.

- Date Run (Check box)

To be selected if the all the jobs scheduled for the date are to be executed. Once checked, the Batch Parameter block will be disabled.

To schedule a batch with a recurrence one can click on the 'Attach Recurrence' button which is optional. This button will open a new block for recurrence. Please refer to Recurrence section for more details.

Project: JBEAM	Doc. Name: JBEAM User Guide 5.1.2	Status: Draft
Document Classification: Internal Restricted when filled.	Date: 8/7/2014 2:25 PM	Page : 34 of 70

- Batch Parameters section

The batch parameters are needed only the execution is of a special type. The execution of the batch will be limited to the given parameters. The following indicates what different types of parameters can be passed to the batch executor.

Entity	Value
PRE	Batch will be executed for the given pre event. (Priority code from META_DATA table of CORE schema)
POLICY	Provide the policy number or numbers for which the batch needs to be executed.
ACCOUNT	Provide the account number or numbers for which the batch needs to be executed.
BROKER	Provide the broker (agent) code or codes for which the batch needs to be executed.
GENERAL	Provide the general data other than policy, account, agent/ broker for which the batch needs to be executed.
POST	Batch will be executed for the given post event. (Priority code from META_DATA table of CORE schema)

All these entities are configured in COLUMN_MAP of both schema (CORE and MOPNITOR). The PRE and POST objects are listed in META_DATA table of CORE schema with priority code.

This section is active if the Date Run check box is not selected in above section and following are the required entries.

- Business Date

This date is

- Entity

As described above, select an entity from the dropdown box. The entities are populated by system, depending upon the installation selected and data in COLUMN_MAP table of MONITOR schema.

- Value

Project: JBEAM	Doc. Name: JBEAM User Guide 5.1.2	Status: Draft
Document Classification: Internal Restricted when filled.	Date: 8/7/2014 2:25 PM	Page : 35 of 70

This field requires the value for which the batch is required to run. It should be always valid and selected from the BATCH_EXECUTOR table of application schema. Enter the appropriate value in this field and click on the link 'Add to list'. The combination is added to Batch Parameters list.

e.g. Entity: POLICY

Value: POL_01

Batch Parameter: POLICY= POL_01

The table given above describes the valid combinations of PRE or POST objects. And following figure shows the snapshot of the META_DATA table.

TASK_NAME	PRE_POST	PRIORITY_CODE1

Note: This may vary from installation to installation and is referenced here for explanation purpose.

- Parameter List

User can view the added entity and values in this box. If user wants to remove an entity/ value pair from the list for whatsoever reason, he can select that / those entries and click on Remove Item link.

Project: JBEAM	Doc. Name: JBEAM User Guide 5.1.2	Status: Draft
Document Classification: Internal	Date: 8/7/2014 2:25 PM	Page : 36 of 70
Restricted when filled.		

Following is an example with the valid data for a batch

Parameters	Value		
Batch Name (Optional)	Batch 101		
Batch run date (Mandatory)	25/01/2013 (The time 23:59:59 will be default)		
End On (Optional)	---		
Execute On Date(Mandatory)	25/01/2013 (The System date in database)		
Execute On Time(Mandatory)	00:00:00 (The System time in database, check once)		
Business Date(Optional)	25/01/2013		
Entity	PRE	POLICY	POST
Value	ALL	POL-01	ALL

To run a batch without schedule, user can click on 'Run' button. On successful submission of request, the system will be redirected to Home page as shown below in Figure 21.

Project: JBEAM	Doc. Name: JBEAM User Guide 5.1.2	Status: Draft
Document Classification: Internal Restricted when filled.	Date: 8/7/2014 2:25 PM	Page : 37 of 70

Document Classification: Internal Restricted when filled.	Date: 8/7/2014 2:25 PM	Page : 39 of 70

- Recurrence

This section of the screen is to be used only if the user wants to schedule the batch in an auto recurrence mode.

The screenshot shows the JBEAM 5.0.5 application window. At the top, there's a header with the MajescoMastek logo, user information (User: Mandar Vaidya, Installation: STGBilling), and system timestamps (Desktop: 01/24/2013 16:29:26, Server [PST]: 01/24/2013 02:59:26). Below the header is a navigation bar with tabs: User Master, Schedule, Run, Reports, Profile, and Batch. The main content area is divided into two panels. The left panel, titled 'Start Batch', contains fields for 'Installation Code' (STGBilling), 'Batch Name', 'Batch Date' (MM/DD/YYYY), 'End Time' (minutes), 'Execute On Date' (01/24/2013), 'Execute On Time' (02:57:30), and a 'Date Run' checkbox. The right panel, titled 'Recurrence Window', contains 'Frequency' (WEEK), 'Recur Every' (1), 'End On' (Date), 'Occurrence' (1), 'Week Day' (Sunday through Saturday), 'Skip Flag' (Skip Schedule), 'Calendar' (Batch Calendar), and 'Keep Alive' (No). A 'Schedule' button is located at the bottom right of the 'Recurrence Window' panel. At the bottom of the window, there is a copyright notice: Copyright © 2007-2012 Mastek All rights reserved.

Figure 23 Schedule Batch with recurrence

Project: JBEAM	Doc. Name: JBEAM User Guide 5.1.2	Status: Draft
Document Classification: Internal Restricted when filled.	Date: 8/7/2014 2:25 PM	Page : 40 of 70

- Frequency

As the batch runs on a Sunday through Thursday basis the frequency is hardcoded to a week.

- Recur Every:

The user can define the recurrence factor such as recur every one week/two weeks, etc. In a regular scenario the recurrence factor will be to recur every 1 week.

- End on date or end occurrences:

End On Date defines the end time of the schedule. End On Date should be used if it is difficult to calculate the number of occurrences.

- Week day

All the Weekdays are displayed with a checkbox. While scheduling a batch, check the desired day/s. Specify days in the week on which, the batch must be executed.

- Skip flag

This has to be used in case the schedule is to be associated with a non-working calendar. Skip flag identifies if the schedule should check for pre-programmed Calendar or a Weekday check. The valid values and description are as follows:

Value	Description
NA	Indicates that there is no skipping of the scheduled date is necessary and it is okay to accept the scheduled date as arrived by the associated frequency. Example if a Calendar frequency "MONTH" is associated and say the schedule starts on Jan 01, 2008 and recur every 1 month then the next schedule will be Feb 01, 2008 and after that it would be Mar 01, 2008. Mar 01 2008 is a Saturday. PRE will not do any checks and will schedule a JOB to be executed on Mar 01, 2008.
D+	Indicates that the schedule should be postponed by a Day.
D-	Indicates that the schedule should be advanced by a Day.
SS	Indicates that the schedule should be skipped to the next recurrence of the schedule.

Project: JBEAM	Doc. Name: JBEAM User Guide 5.1.2	Status: Draft
Document Classification: Internal Restricted when filled.	Date: 8/7/2014 2:25 PM	Page : 41 of 70

- The default calendar that will be referred by the scheduler to identify non-working thus non-scheduling dates. This is applicable only if the skip flag does not equals Not Applicable.
- Keep Alive
This has been introduced as a feature in the schedule. This means that even if the job returns false or throws exception then the schedule will still pro-create the job as per its frequency.
 - Remember that if there is any SQL or IO exception during persistence of the pro-creation of the scheduled job then in that case the scheduler will fail to pro-create the JOB.

To schedule the batch, click on 'Schedule' button.

Project: JBEAM	Doc. Name: JBEAM User Guide 5.1.2	Status: Draft
Document Classification: Internal Restricted when filled.	Date: 8/7/2014 2:25 PM	Page : 42 of 70

10. View Schedules

This screen facilitates to view schedules (Active / non-active). The user with OPERATOR role can cancel any active schedule/s. The buttons Refresh and Cancel Selected are activated for Active schedules only.

Figure 24 View Schedule Screen

By default the frequency type is Week.

For each active schedule a checkbox is provided to select for cancellation.

To select all schedules for cancellation, user can select the checkbox given in header. Same checkbox will help to deselect all schedules.

After cancellation of a schedule, a message as shown in Figure 27 will appear on screen.

11. Define Calendar

The non-working days can be configured using the Define Calendar menu.

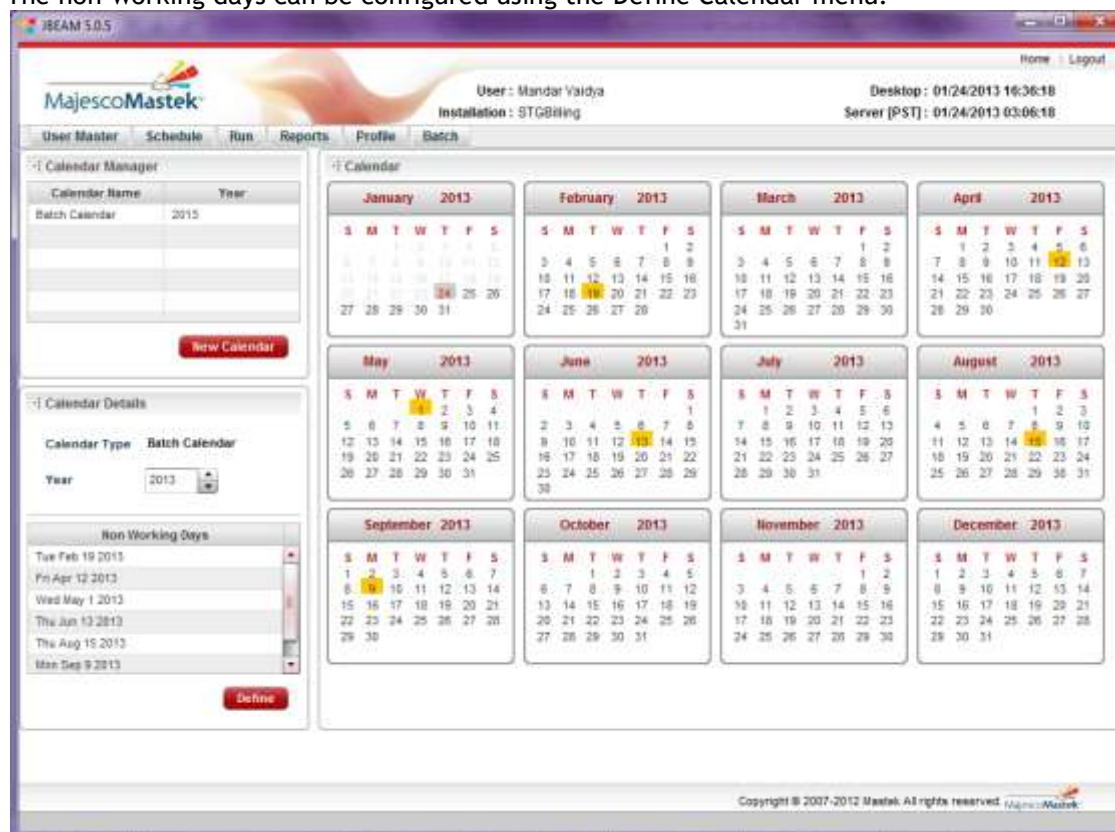

Figure 28 Define Calendar Screen

Project: JBEAM	Doc. Name: JBEAM User Guide 5.1.2	Status: Draft
Document Classification: Internal Restricted when filled.	Date: 8/7/2014 2:25 PM	Page : 46 of 70

This works as follows:

The Define Calendar screen has 3 main sections:

- Calendar Manager

This section displays the defined batch calendars. Upon click of any of the list items, user can view the details of the defined calendar.

- Calendar Details

This section accepts year as the input. To define a calendar, user can click on 'Define' button provided there are non-working days in the table and the year is not defined earlier.

- Calendar

This section displays the Calendar for selected year. To select non working days, user can click on the date.

13. Reports/ Process

In this module user can generate various types of reports. Currently there is only one report (Purge Routine Core) that has been configured.

The screenshot displays the JBEAM 3.7 Reports screen. At the top, the user is logged in as 'Mandar Vaidya' with the installation path 'BILLING-UI'. The 'Reports' section is active, showing a list of reports with 'Purge Routine Core' selected. Below this, the 'Report Parameters' section includes a field for 'n days to retain data' set to 10. The 'Schedule Report' section contains fields for 'Execute Report' (set to 'Offline'), 'Destination Format' (set to 'Select'), 'Schedule Date' (set to '12/17/2010'), 'Schedule Time' (set to '15:49:15'), and 'Email to' (empty). At the bottom of the form are two buttons: 'Run Report' and 'Attach Schedule'. The footer of the window shows the copyright notice: 'Copyright © 2007-2012 Mastek. All rights reserved.' and the Mastek logo.

Figure 31 Reports Screen

Project: JBEAM	Doc. Name: JBEAM User Guide 5.1.2	Status: Draft

Schedule Report

Figure 33 Schedule Panel

Project: JBEAM	Doc. Name: JBEAM User Guide 5.1.2	Status: Draft
Document Classification: Internal Restricted when filled.	Date: 8/7/2014 2:25 PM	Page : 54 of 70

- Frequency
As the batch runs on a Sunday through Thursday basis the frequency is hardcoded to a week.
- Recur Every:
The user can define the recurrence factor such as recur every one week/two weeks, etc. In a regular scenario the recurrence factor will be to recur every 1 week.
- End on date or end occurrences:
End On Date defines the end time of the schedule. End On Date should be used if it is difficult to calculate the number of occurrences. The user can specify specific days in the week on which, the batch must be executed.
- Future Scheduling
Values can be 'Yes' or 'No'. The default is 'Yes'.
- Week Day
All the Weekdays are displayed with a checkbox. While scheduling a batch, check the desired day/s.
- Start time
This will be activated only if the selected frequency is day.
- End Time
This will be activated only if the selected frequency is day.
- Skip flag
This has to be used in case the schedule is to be associated with a non-working calendar. Skip flag identifies if the schedule should check for pre-programmed Calendar or a Weekday check. The valid values and description are as follows:

Project: JBEAM	Doc. Name: JBEAM User Guide 5.1.2	Status: Draft
Document Classification: Internal Restricted when filled.	Date: 8/7/2014 2:25 PM	Page : 55 of 70

Value	Description
NA	indicates that there is no skipping of the scheduled date is necessary and it is okay to accept the scheduled date as arrived by the associated frequency. Example if a Calendar frequency "MONTH" is associated and say the schedule starts on Jan 01, 2008 and recur every 1 month then the next schedule will be Feb 01, 2008 and after that it would be Mar 01, 2008. Mar 01 2008 is a Saturday. PRE will not do any checks and will schedule a JOB to be executed on Mar 01, 2008.
D+	indicates that the schedule should be postponed by a Day.
D-	indicates that the schedule should be advanced by a Day.
SS	Indicates that the schedule should be skipped to the next recurrence of the schedule.

For D+ or D- or SS there must be at least a ICalendar or a Weekday Check Flag or both, otherwise the skip flag must be NA.

- The default calendar that will be referred by the scheduler to identify non-working thus non-scheduling dates. This is applicable only if the skip flag does not equals Not Applicable.

14. Manage user

This module facilitates the user management.

Figure 34 Manage User Screen

Project: JBEAM	Doc. Name: JBEAM User Guide 5.1.2	Status: Draft
Document Classification: Internal Restricted when filled.	Date: 8/7/2014 2:25 PM	Page : 57 of 70

In order to make the UI user -role based, there are certain roles configured in JBEAM. Following are the details for these roles:

Role	Significance
CONNECT	It provides access for JBEAM UI. This as well as ADMIN role are meant for the application and not for individual installations.
ADMIN	Can manage users, reset password for any user.
USER	Can view the batch processing, however may not be able to operate (run/resume/stop) batch and define calendar.
OPERATOR	Can operate (run/resume/stop) batch and define calendar. The USER role is automatically provided with this role.

This screen is available to a user with ADMIN role only. Here the ADMIN can create a user, modify existing user, and reset the password for a user.

Project: JBEAM	Doc. Name: JBEAM User Guide 5.1.2	Status: Draft
Document Classification: Internal Restricted when filled.	Date: 8/7/2014 2:25 PM	Page : 58 of 70

This screen has three main parts:

- Create/Edit User

Create User

'User Id:

'User Name:

'Email Id:

Is Admin: ☐

Reset Password: ☐

'Effective Date:

'Expiry Date:

Phone no:

Can Connect: ☒

Figure 35 Create/ Edit User Section in Manage User Screen

Note: '' indicates the mandatory fields.*

Project: JBEAM	Doc. Name: JBEAM User Guide 5.1.2	Status: Draft
Document Classification: Internal Restricted when filled.	Date: 8/7/2014 2:25 PM	Page : 59 of 70

➤ Mandatory fields

- User Id

Login id of the user. Maximum length 10 characters.

- User name

Name of the user. Maximum length 50 characters.

- Email Id

A valid email id. This will be used to send login password related information. In following cases emails will be sent:

- ✓ New user created
- ✓ Reset Password by ADMIN
- ✓ Reset Password using 'Forgot Password' link

- Effective date

The effective date should be always less than or equal to the system date.

- Expiry date

The expiry date should be always greater than or equal to the system date.

➤ Optional Fields

- Phone number

Indicate the contact number.

- Is Admin (Check box)

To be selected if the new user is needs ADMIN role.

- Can Connect (Check box)

Project: JBEAM	Doc. Name: JBEAM User Guide 5.1.2	Status: Draft
Document Classification: Internal Restricted when filled.	Date: 8/7/2014 2:25 PM	Page : 60 of 70

By default this is checked. This is essential for login. If unchecked, the user even though is valid, will not be allowed to login.

In JBEAM, there is no provision to delete a user. To restrict any user from accessing JBEAM UI, uncheck this checkbox or change the expiry date.

- Reset Password (Check box)

Resets the password for selected user.

- Assign Role and Installations

As shown in the figure, there are 2 lists provided on LHS namely Roles and Installations. ADMIN can assign appropriate roles and installations to a user, by selecting from the list and click on '>>' button. The desired combination will be displayed in the RHS table. ADMIN can remove any role-installation combination, by selecting the desired combination of role and installation and click on '<<' button. While selecting or deselecting roles- installations, following should be kept in mind:

- If OPERATOR role is assigned, the USER role is assigned automatically for the selected installation. Vice versa is not true.
- If USER role is removed from Installation Role List (RHS table), OPERATOR role will also be remove for that installation. Vice versa is not true.

Figure 23 Assign Role and installation section in Manage User Screen
